

# Don't forget to check:

## Vaccine Preparation

-  **Thaw** expiry date?
-  **Manufacture** expiry date?
-  Time the vial was first **punctured**?
-  Time the syringe was **drawn**?

- **DISCARD** the vaccine if it exceeds expiry dates and times.
- **Checking AIR** before administering the vaccine will help avoid vaccination administration errors.

## Vaccine Administration

Check Australian Immunisation Register (**AIR**) before administering vaccine

**Right** vaccine for the patient?

**Right** dose interval?

**Right** dose for this patient and cohort?

If required, has the vaccine been **diluted** correctly?

If you respond 'No' to any of the above,  
**DO NOT** administer the vaccine.
