INFORMATION SHEET

Pregnancy Checklist

Below includes a list of suggested topics you should discuss with your GP/ health professional during your pregnancy and following birth

Models of antenatal care - public hospital based, midwife clinics, GP antenatal shared care, midwifery group practice, private obstetrician
Contact relevant hospital to arrange first hospital "booking in" appointment ASAP. This visit should be scheduled for when you are ~ 12-14 weeks pregnant. <i>RPA Women and Babies</i> <u>https://www.slhd.nsw.gov.au/RPA/WomenAndBabies/default.html</u> <i>Canterbury Hospital</i> ph. 9787 0250 <u>https://www.slhd.nsw.gov.au/canterbury/maternity.html</u>
Course of action if noticing symptoms of bleeding or pain. If stable, referral to Early Pregnancy Assessment Clinic (EPAS)
Advice regarding pregnancy nutrition and lifestyle - balanced diet, recommended supplements including folic acid and iodine, suggested exercise, recommended weight gain
Advice about ceasing harmful habits - smoking, alcohol, other drugs
Screening for social and emotional wellbeing as well as support networks. Depression is a common and significant complication both during and after the baby is born
Concerns regarding personal or family history of a hereditary and/or genetic condition, previous adverse pregnancy outcome
Assessment of any current medical / health conditions and medication check (if applicable)
Review potential workplace exposures or risks
Attend cervical screen (if due)
Attend recommended routine antenatal blood and urine tests
Complete baseline assessments including blood pressure, weight, body mass index (BMI)
Assessment of risk for gestational diabetes (GDM) and arrange screening early in pregnancy if at high risk
Discuss prenatal screening options including combined first trimester screening (cFTS) and non- invasive prenatal testing (NIPT). These tests give an estimate of your risk of having a baby with a chromosomal abnormality. cFTS can be done between 11-13 ⁺⁶ weeks of pregnancy. NIPT from 10 weeks onwards. These tests do not give a definite answer about the health of your baby. Further tests may be recommended.
Recommend influenza vaccination regardless of your stage of pregnancy
18-20 weeks: Morphology scan/ultrasound to check baby's well-being, size and development
Follow-up visit to review results regarding blood tests, prenatal screening and ultrasound. Don't assume that that everything is fine if you haven't been contacted

ter start

CENTRAL AND EASTERN SYDNEY

An Australian Government Initiative

Antenatal visits to monitor maternal and baby's well-being. These are generally attended per following schedule – every 4 weeks 12-30 weeks, then every 2 weeks 30-37 weeks, then weekly 38-40 weeks. Follow-up at 41 weeks if you have not yet delivered.
Discuss maternal awareness of fetal movements at each antenatal visit. Immediately contact relevant maternity hospital if you notice any change in the pattern of your baby movements.
Start talking about breastfeeding. Any fears or concerns that you may have are best addressed early so that you can deal with them before you are breastfeeding your baby
Contact relevant hospital Parent Education services to arrange classes and/or hospital tour
20-32 weeks: Recommend pertussis 'whooping cough' vaccination
26-29 weeks: Routine screening for gestational diabetes (unless already diagnosed with GDM)
Discuss management/treatment if you are Rhesus negative blood group. If you have any vaginal bleeding, contact the hospital ASAP
35-37 weeks: Genital swab for Group B Streptococcus (GBS)
20. 27th weaker littless and to shack belows well being presentation and placental position
36-37 ⁺⁶ weeks: Ultrasound to check baby's well-being, presentation and placental position
Consider labour and birth plans. Ensure you have contact details for relevant hospital delivery ward/unit

NB: This is intended as a guide only developed by the SLHD/CESPHN ANSC GP Program. You may wish to discuss additional information with your GP/health professional.
