

Record of Immunisation QI activity

Month / Year:	
Immunisation QIA project:	Overdue childhood immunisations
Project overview:	<p>This project aims to identify and recall patients aged 0 to 5 years who are overdue for one or more routine childhood vaccinations as recorded on the Australian Immunisation Register (AIR).</p> <p>A report will be data extracted from AIR, generating a list of patients overdue for childhood vaccine/s. The parent/carer of these children will be contacted to offer a catch-up vaccination appointment.</p> <p>The project will run for 60 days, with the option to extend or repeat the activity if there are remaining patients who have not been contacted within this timeframe.</p>
Project commencement date: <i>Date report generated</i>	
Initial benchmark: <i>Number of overdue children</i>	
Progress (30 days): <i>Number of children who are up to date at 30 days</i>	
Progress (60 days): <i>Number of children who are up to date at 60 days</i>	
Outcome:	
Improvement measure:
