

MyMedicare Minute – Week 5

One key message. One minute to read.

All patients can receive a GP Chronic Condition Management Plan (GPCCMP) and eligible reviews from their usual GP.

- Patients can access chronic condition management (CCM) services through their MyMedicare practice, or if not registered, their usual GP.
- MyMedicare registration is optional, and patients are encouraged to register, particularly if they believe it will support continuity of care with their usual practice.
- Patients with a chronic condition may benefit from registering as MyMedicare is designed to help strengthen continuity of care with their regular practice.

What practices need to know

- To avoid your practice having a declined MBS claim, you can check their registration status in the 'Your Practice' section of PRODA, prior to the appointment.
- While there is no financial or operational disadvantage for practices when a patient is not registered with MyMedicare, registration can support stronger continuity of care by formalising their relationship with your practice.
- MyMedicare formalises the patient–practice relationship, so it is important that patients understand they need to see your practice for chronic condition management items.
- CCM arrangements remain unchanged for patients who are not registered in MyMedicare. Consistent with long-standing requirements, assessments and reviews must be provided by the patient's usual GP.
